

F.I.B.E.R.

Make fibrous root systems with **RootMaker®** knit fabric containers.

Fill knit fabric container either with field soil or soilless mix and plant seedling.

Insert planted container into a similarly sized planting hole or cavity in a cinder block above ground. Mulch cinder block trees in hardiness zones 1-7.

Begin care as usual. Water, fertilize, stake if necessary.

Enjoy watching the trees grow for a season (5") or two (8").

Remove entire bag before planting. Slit sides and carefully peel back to expose the fine fibrous roots created within.
